Authenticator Reader

TSSI's Authenticator Reader provides a convenient and reliable method of checking the authenticity of documents which are protected with the highly secure DeedMark seal technology.

This battery or main operated reader is completely portable allowing use both on-site and at remote locations. The ergonomic design enables easy use by left or right handed people without modification. To validate a document the user simply scans the reader across the surface of the seal. If the seal is genuine, the identity number is displayed on the integral LCD and the data can be sent direct to a PC via the optional flexible data lead. This same data lead can be used to provide power from an external power supply unit.

A Scipher Company

Authenticator Reader

Features

- Reads DeedMark secure seals
- Fully portable, pocket sized unit
- Mains or battery power supply
- Integral LCD with programmable display
- LED indicates successful read/power supply status
- Ergonomically designed for left or right handed use
- Power save facility when not in use
- Data transfer ability via RS232 link

Product Data

Size:	30mm x 69mm x 41mm
Weight:	0.18kg (without batteries)
Power:	12V 100mA or 2 x AA batteries
RS232:	9 pin D type connector, 19,200 bit/s
Temperature:	Storage/Operating -10 to 50 C
Humidity:	Storage/Operating up to 80% non condensing
LCD:	2 lines, each 16 characters long
Battery Life:	In excess of 1500 on/off cycles (tested using Duracell Batteries)

Accessories

- 2 x AA batteries
- 2m flexible lead providing 9 pin RS232 connection
- 12V DC mains power adapter
