

SECURING BUSINESS AROUND THE WORLD

OEM fingerprint solutions

Want to offer your customers a biometric solution?

Worried about integration and support?

Verid+OEM module solves your problems!

Verid+OEM

Adding fingerprint biometrics to your product range isn't complicated or expensive with the Verid+OEM module. Easy integration, backed up with high quality support will reduce time to market and development costs.

Enhance your brand without risking your reputation with a reliable OEM product that is based on TSSI's proven and reliable Verid+ fingerprint reader.

TSSI's award winning 52 byte template enables your products to offer the widest range of template management solutions. Templates can be stored onto a Legic, iCLASS or Mifare smart card, or printed as a 2D barcode or using magnetic stripe technology.

Verid+OEM - the fast track to enabling biometrics in your product range.

flexible OEM solutions

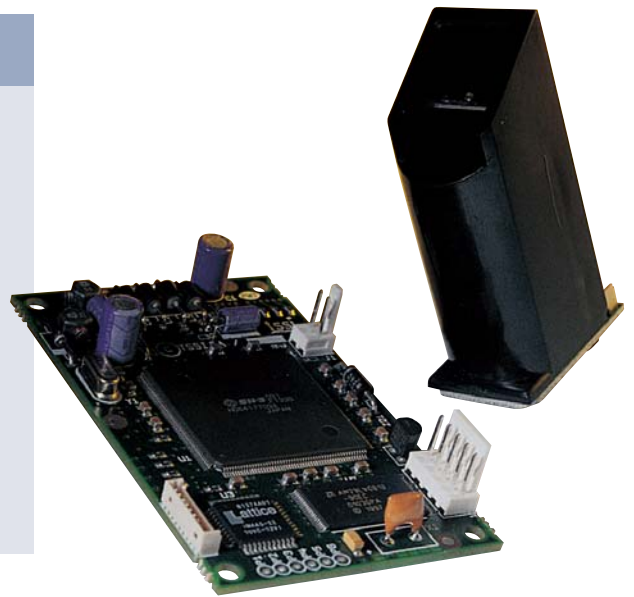

TSSI's Verid+OEM is the perfect solution for manufacturers who are serious about using fingerprint biometrics

Our complete range of OEM options include:

- an easy to incorporate PCB and optics for a fast and simple route to integrating biometrics;
- a simple chip-set for inclusion onto your own pcb; and
- licensing the verification algorithm.

How our customers use Verid+OEM:

- EPOS solutions preventing fraud within retail
- Industrial health & safety compliance
- Securing access to key cabinets
- OEM access control products
- Portable PDA units for identity verification
- Time & Attendance systems
- School attendance registration systems
- Adding extra security to cash safes

The OEM module has been developed with usability and ease of implementation in mind. The modules have been integrated into many products including access control readers, time and attendance systems and key cabinets. In each instance the demand has been for increased security and improved functionality.

Our fingerprint template is remarkably small making the storage and transmission of the template both easy and cost-effective. Template data can be stored in a small, low cost smart card, magnetic stripe or even combined with other data in a 2D barcode.

Features of Verid+OEM

- Compact design
- Ease of integration
- Extending product life
- Robust and field proven technology
- Small 52 byte template
- Fast enrolment & verification
- Simple interface
